

Executive Summary

Retail Sales Performance Dashboard - Tableau

Author: Victoria Zhang | Tool: Tableau | Dataset: Sample Superstore

Project Overview

This project presents an interactive Tableau dashboard designed to monitor retail sales performance across revenue, profitability, customer segments, product categories, and geographic regions. The dashboard translates order-level data into management-ready KPIs, visual insights, and business recommendations.

Dashboard Scope

- Sales Performance
- Profitability
- Customer Segmentation
- Product Performance
- Regional Analysis

Key Findings

- Total Sales reached **\$2.30M**
- Total Profit reached **\$286K** with a **12.47%** profit margin
- Technology generated the highest sales among all product categories
- Consumer customers represented the company's largest customer segment
- California generated the highest profit while Texas recorded the largest loss
- Sales demonstrated a steady upward trend across the reporting period

Recommendations

Revenue Growth

- Continue investing in high-performing Technology products

Customer Strategy

- Prioritise Consumer customers while identifying growth opportunities within the Home Office segment

Regional Performance

- Investigate loss-making states such as Texas by reviewing pricing, discount and operational strategies

Product Management

- Focus inventory planning and marketing resources on top-performing products
-

Business Value

This dashboard enables management to monitor business performance, identify improvement opportunities, and support data-driven decision-making through interactive visualisations
